DIRECTIONS FOR USE:

For use on all turf areas, including fairways, greens, and tees where a high potassium fertilization is desired.

May be used anytime during the growing season. Application may be repeated in 3 to 4 months if necessary. Potassium fertilization may help to improve drought hardiness, provide greater disease resistance and improve wear tolerance. The maximum benefit of potassium fertilization is realized when applied sufficiently in advance of these stress periods to allow for a growth response.

Apply to dry foliage and water in prior to mowing to move particles below mowing height.
