DIRECTIONS FOR USE:

Apply anytime turfgrasses need fertilization from the time the turf comes out of dormancy in the spring to as long as the grass is actively growing in the fall. Application may be repeated after 6 weeks as needed.

Apply to dry foliage.

Apply at the **NORMAL RATE** of 0.36 kg N / 100 sq. metres (0.75 lb N / 1,000 sq. ft.). Equivalent to 2.4 kg of product per 100 sq. metres or 5 lb of product per 1,000 sq. ft.

Apply at the NORMAL RATE in spring or fall to promote more greening and density enhancement.

When high temperatures of 30° C (85° F) or above are anticipated, apply at the **LIGHT RATE** of 0.24 kg N / 100 sq. metres (0.5 lb N / 1,000 sq. ft.) Equivalent to 1.6 kg of product per 100 sq. metres or 3.3 lb of product per 1,000 sq. ft.

Avoid mowing after application to prevent particle pick-up and fracture. Irrigating prior to mowing will reduce particle pick-up.

Product may remain visible in the turf for several days following application. For low cut turf, do not collect clippings for at least several days following application.

Do not use on putting greens or other turf areas mowed at less than 0.6 cm (1/4 inch).

Do not use with a drop-type spreader. Do not use at rates lower than those recommended since mottling may occur.

Do not expose unused product to moisture.

STORAGE AND USE:

Store in a clean, dry place.

Reseal opened bag by folding top down and securing.

Use only clean, dry spreaders.

Do not leave unused product in spreaders.
